PROFILE

I have run both halves of a product. At Harri I lead mobile engineering for a frontline workforce platform: 11 engineers across Android, iOS and Flutter, up to 8 of them direct reports, five production apps serving over 45,000 daily users. At Tal3a, the marketplace I founded, I owned the whole loop myself: how people find it, sign up, and come back.

I own the people side in full, from hiring to performance reviews and promotions, and I stay close to product and the details by choice. Tal3a taught me the lesson I most want to apply next: we shipped a product that worked, and learned that distribution, not the product, was the constraint.

EXPERIENCE

Harri · Android | Flutter Lead

January 2018 to present · Ramallah, remote to a US-headquartered company

Hired as an Android Developer, promoted to Android Lead, then to Android | Flutter Lead as the remit grew to cover Flutter and the iOS engineers. Harri is a frontline employee experience platform for hospitality.

- Lead an 11-engineer group across Android, iOS and Flutter, up to 8 direct reports, including native iOS engineers. I own their 1:1s, performance reviews, career development and promotions, and set the hiring bar; engineers I hired are still on the team, and some have grown into more senior work.
- Work across backend, QA, product, design and delivery to keep projects moving. I delegate ownership to the team and take the hard calls myself: technical decisions, company mobile proofs of concept, production quality, and support escalations.
- Led the unification of two live production apps into one modular app, moving from plain MVVM to multi-module clean architecture, and deciding which flows survived without breaking users' trust mid-shift.
- Own release engineering: staged rollouts through Play Console and feature flags through remote config, holding Team Live at 99.6% crash-free users and a 4.7 star rating across roughly 6,800 reviews.
- Built the team's AI-assisted engineering workflow, used daily: a plugin marketplace of Claude Code skills, automated API contract checks between mobile and backend, and agent-driven device verification of features. Every change is still reviewed and owned by a person.
- Authored the Android and Flutter chapter structure, set Flutter Add-to-App as the cross-platform standard, and run the team's practices: TDD, continuous integration and mob programming.

Tal3a · Founder and technical lead

2024 to present · Arabic-first, cash-on-delivery marketplace for the West Bank

- Took it from idea to a live marketplace on both app stores, taking real orders. I research and write the product specs and flows, own architecture and mobile, and lead a backend and a frontend engineer through implementation.
- Owned growth: merchant acquisition through a field sales playbook and direct outreach, user acquisition beyond paid ads, and retention through a loyalty programme where daily streaks became the main reason people came back.
- Built Al-Haj from the ground up, an AI shopping assistant launching soon that works like asking the person behind the counter: it knows your size and preferences, suggests outfits, and understands Palestinian dialect.

Yamsafer · Android Developer

December 2016 to January 2018

Android development on a hotel booking app for travellers across the Arab world.

SKILLS

Leadership People management, hiring, performance reviews, career development, delegation, cross-functional delivery with product, design, backend and QA

Product and growth Merchant and user acquisition, referral and loyalty mechanics, retention through streaks, Arabic-first and right-to-left UX

Android Kotlin, Jetpack Compose, Hilt, Room, LiveData, Coroutines, Play Console staged rollouts, remote-config feature flags

Cross-platform Flutter and Dart, Flutter Add-to-App, Riverpod, Firebase

Architecture Multi-module clean architecture, MVVM, large-codebase modularization, migration of live products

AI and tooling Agentic engineering workflows on Claude Code; LLM product features with retrieval, tool calling and agent memory

EDUCATION

BSc Computer Engineering · An-Najah National University · 2017
